

Aloha
Payment Guard™

ALOHA PAYMENT GUARD

Staying up-to-date with the latest Payment Card Industry Data Security Standards (PCI DSS) can be burdensome as the rules for compliancy constantly evolve. Yet PCI compliance is not optional for merchants, which is why Radiant Systems developed Aloha Payment Guard™, a new payment processing security feature of Aloha POS.

Aloha POS uses a token replacement process to disguise data in an unrecognizable form to prohibit identification from potential hackers, helping merchants feel more secure with their level of PCI compliance coverage. Add value to your investment by choosing a single provider with tightly-integrated and secure Radiant payment processing and POS services.

INCREASED TRUST

- Process all card data from every transaction in a tightly-secure environment
- Keep cardholder data from being recognized at the point of sale, reducing compliance concerns

EASE OF ONE PROVIDER

- Highly-integrated payments system makes payment security easy with a single provider
- Aloha Payment Guard is a feature of Aloha POS and Radiant Payment Services (RPS), not an awkward addition to your technology solution

INCREASED SPEED-OF-SERVICE

- Tight integration of Aloha Payment Guard with Aloha POS reduces payment processing time
- Maximize profits and allow sales to happen faster with increased speed-of-service

ADDED VALUE

- Aloha Payment Guard is no additional cost to merchants – all that is required is the Aloha POS version 6.5 or higher

WHAT IS TOKEN REPLACEMENT TECHNOLOGY?

Through the token replacement process, credit card data is sent to the secure host in an encrypted form. At the host, this data is processed and assigned a unique token identifier, which is sent back to the point of sale for future reference. Token replacement prohibits cardholder data from being recognized in a usable form, helping merchants achieve a higher level of PCI compliance by ensuring that cardholder data cannot be recognized at the site level.
