

Our Security Solution

- **Site Shield** is a managed commercial grade hardware firewall service and much more. Radiant separates the Payment Network from other PCs and networks that are needed for business operations. This is done by configuring Virtual Local Area Networks (VLANs) for other business equipment that shares access to the Internet.
- **Threat Defender** is an ongoing monitor and network defense service. It attacks and defends against malware that finds a way past perimeter and in-store physical security defenses. It encompasses all of Radiant's efforts to continually improve layered security measures within the operator's Cardholder Environment (CDE).

- **Secure Access** is a secure remote access tool. Radiant provides a two-factor secured application for accessing the point-of-sale (POS) back office PC and network.

The Facts

- **PCI Compliance is mandatory,** but achieving PCI Compliance does not ensure you are safe from a security compromise.
- **Cybercrime is on the rise.** Visa reports that more credit card information is stolen at restaurants than at any other type of business.
"Close to half of U.S. small to medium size businesses (SMB) have been hit by some form of cybercrime."
"It's not that SMBs are unaware of the threats. Some 97% of U.S. SMBs have installed anti-virus and 95% claim their security systems are up to date. But many still lack other common security protections."
- **Crimeware is a type of software** that through forensic audits has been determined by card brands to have aided past cybercrimes. To put it in terms of a bank robbery, crimeware would be evidence found after a robbery, like a weapon used to hold up a clerk, a mask used to hide someone's identity or a crowbar used to open a door.
- **Our mission is to help** businesses better understand the nature of industry compliance regulations and cybercrime.

A Radiant Secured Network

Benefits of the Radiant Security Services Solution

- Gain peace of mind
- Provide secure Wi-Fi for your customers and enhance the customer experience
- Secure credit card transactions and maintain customer confidence
